

BRUSH-PROTECTED TRANSPORT RACKS

Different panels. Different handling needs.

A purpose-built range for protecting, organizing and moving wood panels safely through the workshop.

UNIQUE FEATURES

Protect every panel. Improve every movement.

Wood panels often pass through several machines and workstations before a project is complete. Deltarack keeps individual components protected, organized and directly accessible between each production step.

Brush protection on every contact side

Side, base and back brushes help protect sensitive panel surfaces from direct contact with the rack and other components.

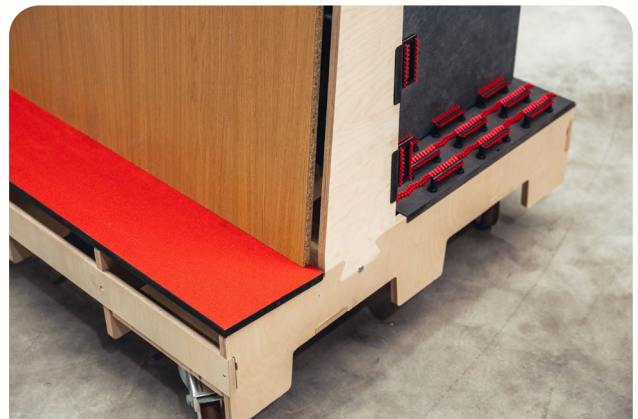

Direct access to every panel

Each panel has its own position, so there is no need to unload an entire stack to reach the component you need.

Keep projects together

Group components by project and maintain a cleaner, more structured workflow throughout the workshop.

One rack for mixed panel sizes

Hybrid configurations combine brush-protected slots with an A-frame-style support for oversized panels.

CONFIGURATION MATRIX

Choose the right configuration

Available in standard and hybrid configurations, with multiple mobility options and a total length of 57.5 inches. **Every rack can be extended in height with an extra row of brushes.**

Brush rack
31.5 inches wide
Usable brush area: 24 inches wide
